

TCL & DCL

DCL :

GRANT → to give a permission

REVOKE → to remove a permission

Grant is to give a permission to the users

SELECT, INSERT, UPDATE, DELETE,
ALL PRIVILEGES

GRANT permission on database_name.
tablename to 'username' @ 'localhost';

Example

GRANT SELECT ON companydb.users
to 'root' @ 'localhost';

GRANT ALL PRIVILEGES ON companydb.users
to 'root' @ 'localhost';

GRANT instead of use REVOKE
In queries we can use both
of it in SQL

Transaction control language it
manages the transaction and save
the changes and undo the
changes.

Transaction means group of
SQL operations to executed together

Commands:

COMMIT → Permanent

ROLLBACK

SAVEPOINT

QUERY:

1) update accounts set balance = balance -
10000 where user_id = 1;
commit;

2) ROLLBACK :
Cancels the transactions
works in update

3) Savepoints → creates the checkpoint
inside transaction

QUERY :

SAVEPOINTS sp;
